

## Pendulum fans

Often there are small rooms or shafts in buildings, which are for example very humid and can hardly be ventilated with fresh air. Suitable for this purpose are the ventilators type 100 - 152 as well as 100 - 232 for small rooms, where there is no possibility to install a second ventilator for cross ventilation.

For this case the pendulum fans were developed, which can change their ventilation direction automatically and thus ventilate and dehumidify a small room.

The ventilation direction is changed approx. every 5 minutes, so that a sufficient air exchange is guaranteed. The ventilators are suitable for both wall and window installation.

The necessary screw set as well as adapter plates for wall installation are available from us as accessories.

Technical data	100 - 152	100 - 232
Diameter (glass cutout)	186 mm	258 mm
Diameter (core bore)	200 mm	250 mm
Fan diameter	Ø 150 mm	Ø 230 mm
Fan capacity	235 m <sup>3</sup> / h	480 m <sup>3</sup> / h
Power consumption max.	25 Watts	26 Watts
Speed (revolution/min.)	1340	790
Sound pressure (db(a))-3m	37,5	35,6
Weight	2,07 kg	3,45 kg

Art.Nro	A	B	C	D
100 - 152	215	218	31	97,5
100 - 232	294	297	31	130
